

- Presents a visual representation of process flows within Oracle E-Business Suite instances, allowing you to observe user and concurrent manager activity in real time
- Designed specifically for the applications administrator
- Shows information about the application's user, not just the Oracle session details
- Visually identifies bottlenecks and provides extensive drilldown capabilities
- Differentiates between month-end and normal monthly processing periods
- Alerts if duplicate requests are submitted or if specified programs are run during month end
- Provides detailed statistics about Concurrent Program runtimes and Manager workload
- Offers comprehensive details of all concurrent requests either completed, running or pending—including job sets
- Complements Quest Software's Foglight® for 24x7, unattended monitoring of Oracle E-Business Suite and Quest Central™ for Oracle for complete database management

## **Spotlight**<sup>®</sup> on Oracle E-Business Suite

### The Real-Time Diagnostic Tool for the Oracle E-Business Suite Environment

For a busy administrator, using manual methods to diagnose and resolve Oracle E-Business Suite performance is very time consuming. Without a clear view of user and concurrent manager activity, the applications administrator learns of performance problems only after they occur. Spotlight® empowers administrators with every detail needed to quickly identify and eliminate bottlenecks in their Oracle E-Business Suite environment.

#### The Real-Time Diagnostic Solution

Spotlight, a Windows®-based diagnostic solution, makes real-time diagnosis simple and intuitive. Spotlight features patent-pending technology that displays the actual processing architecture of databases, applications and operating systems throughout the environment. Spotlight helps you pinpoint and rapidly resolve the source of problems even before they occur. Graphical flows illustrate, in real time, the rate at which data is moving between components.

#### Automatic Problem Detection for Instant Resolution

With Spotlight, users can drill down to details, locating in-depth information about the source of a problem. Since the run-time nature of each database is unique, Spotlight offers a calibration process that automatically sets a baseline of normal activity for each instance. This allows Spotlight to automatically set thresholds and send a warning of impending problems with a visual or audible alert. With these advanced warnings, administrators have time to eliminate bottlenecks before they impact users. From an overview screen, administrators can view overall system activity and alleviate problem areas as they occur.

#### Main Components

##### Detailed Concurrent Manager Diagnostics

All concurrent requests and their properties are shown in easy to see screens. If a request exceeds its expected runtime, an alarm is triggered. You can also grant Spotlight the ability to cancel, terminate or hold requests depending on their current status. Workload by manager is shown as well as detailed Report Set information for all defined or running sets. This information makes the task of managing Concurrent Requests much easier by helping the administrator detect anomalies and balance the load for optimal performance—particularly during critical month-end processing.

##### Online Oracle E-Business Suite Tuning Guide

Spotlight's online help provides detailed instructions for diagnosing Oracle E-Business Suite performance problems. Quest Software's world-renowned industry experts contributed to the guide, so you can benefit from their extensive Oracle knowledge.

## System Requirements

### Client

- PC running Windows 95, 98, 2000/2003 or XP Server
- Oracle 7.3.4 and above running on AIX, Tru64 UNIX, HP-UX, Sun Solaris, Windows NT/2000/2003 or Linux

### Oracle E-Business Suite

- Oracle E-Business Suite 11i

## Integrated Solutions for Maximum Performance

Spotlight on Oracle E-Business Suite is just one component of Quest Software's application monitoring family, which includes:

- Foglight® is a 24x7 application monitor that provides detailed information about every component of the Oracle E-Business Suite technology stack—providing proactive detection of problems and ensuring resolution of these issues before users and service levels are affected.
- Quest Central® for Oracle combines Quest Software's industry-leading database management tools into one product. Products formerly known as Spotlight® on Oracle, SQLab Vision® and Space Manager™ are incorporated into Quest Central with additional database management functionality, providing everything DBA teams need to complete daily tasks.

### About Quest Software, Inc.

Quest Software, Inc. delivers innovative products that help organizations get more performance and productivity from their applications, databases and Windows infrastructure. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 18,000 customers worldwide meet higher expectations for enterprise IT. Quest Software can be found in offices around the globe and at [www.quest.com](http://www.quest.com).
